ABOUT

I am Varshana, a passionate student pursuing B.Tech in Artificial Intelligence and Data Science at SNS College of Engineering. | completed my schooling at Sacred Heart Matric Higher sec school. Participated in 3 hackathons Tnstartup Card Holder for my own Startup based on Ai counselling

EXPERIENCE

Full stack development- Internship Eduspine

- 06/2025 – 07/2025
- Gained hands-on experience in Agile software development, coding, testing, and version control.
 - Collaborated with teams to deliver solutions while strengthening problem-solving and communication skills.
 - Worked on real-world projects, applying theoretical concepts to practical software solutions.
 - Improved adaptability and time management by meeting sprint deadlines and responding to changing requirements.

EDUCATION

Higher Secondary Education

Sacred Heart Matric Higher Secondary School
Completed school education with strong academic performance , disciplined study habits, and a consistent commitment to continuous learning and personal development.

B.Tech Artificial Intelligence & Data Science

SNS Institution
2024 – Present
Developed strong analytical, problem-solving, and teamwork skills through academic work and projects, with a consistent focus on professionalism and continuous learning.

SKILLS

Python, Java
AI/ML & Agentic AI
SQL
Web development
Git
GitHub
Software Testing
Digital Marketing

Certificates

- Getting Started with AI on Jetson Nano - NVIDIA
- Artificial Intelligence Fundamentals - IBM
- Python Basics - Greeting Learning

Projects

FlowPit

Designed and implemented an intelligent navigation system that determines optimal shortest paths by incorporating real-time traffic data. The system enhances commuting efficiency through dynamic route adjustments and ensures accurate, reliable guidance for users.

Veritas Developed a multi-language fake news detection platform capable of verifying the authenticity of text, images, and videos using advanced deep learning models. The system identifies misinformation with high accuracy and supports real-time analysis, contributing to safer and more reliable digital information environments.

Recruit Ai

Developed an end-to-end AI recruitment platform that automates candidate screening by shortlisting resumes, generating skill-specific assessment questions, and managing secure test delivery through email-based authentication tokens. The system enhances hiring efficiency and ensures a structured, data-driven evaluation process.
